SUMMARY

Computer Science student and two-time Solutions Engineering intern who turns technical software into clear business value for non-technical buyers. Experienced running product demos, leading discovery conversations, and guiding manufacturing businesses through the move from paper-based processes to SaaS software. Pairs hands-on full-stack development (Python, JavaScript, SQL, REST APIs) with strong customer communication and a founder's instinct for solving operational problems. Seeking an Associate Solutions Engineer / Sales Engineer role spanning technical pre-sales, solution design, and customer onboarding where technical depth meets customer impact.

SKILLS

Solutions Engineering: Technical Pre-Sales, Product Demonstrations, Discovery Calls, Requirements Gathering, Solution Design, Proof of Concept (POC), Customer Onboarding & Implementation, ROI / Business Value Selling, Stakeholder Management, Technical Consulting, Cross-Functional Collaboration

Technical: Python, JavaScript, SQL, REST APIs, API Integration, HTML/CSS, Database Design, Git, Cloud / SaaS

Tools: Git/GitHub, VS Code, Slack, Excel, pandas, BeautifulSoup

Domains: B2B SaaS, Enterprise Software, Customer Success, Business Process Analysis, Technical Documentation, Agile Collaboration

EXPERIENCE

Solutions Engineer Intern — SnapSOP

May 2025 – Present

- Delivered 13 product demonstrations to manufacturing businesses across Colorado, translating technical software capabilities into clear business value for non-technical owners, operations managers, and executives.
- Led discovery conversations with 24 prospective customers to uncover operational pain points and gather requirements, mapping paper-based workflows to fitting software solutions.
- Represented the company at COMP 2025, a regional manufacturing conference, presenting the product to hundreds of attendees and answering technical questions live; selected to present again at the October 2026 conference.
- Guided business owners through the transition from paper-based processes to digital SOP systems, articulating the operational impact and ROI of software adoption.
- Partnered with leadership and customers throughout onboarding discussions, communicating complex technical concepts in simple, outcome-focused language.
- Restructured the bug-tracking system and documented 40+ issues by type, priority, and ownership to improve cross-team visibility; resolved customer-facing UI/UX issues with HTML and CSS.

Full Stack Developer Intern — Why Not Go Pro

May 2024 – Aug 2024

- Designed and independently built an end-to-end score-tracking platform that integrated the client's API to display live data from 6 basketball machines on a public website.
- Architected the backend database for historical player data and built leaderboard and ranking systems to drive customer engagement.
- Owned the full solution lifecycle as sole developer — backend logic, API integration, and a clean, user-focused interface — delivering a production website for the client.

Founder & Manager — M&M Power Washing

May 2020 – Aug 2022

- Founded and ran a service business, managing a 3-person team and coordinating project scheduling across neighborhoods.
- Generated 80+ leads and closed 63 into paying contracts (79% close rate), securing \$10,000+ in revenue within three months.
- Owned the full customer relationship from lead generation and discovery through delivery and account management.

PROJECTS

Executive Operations Dashboard — Python, JavaScript, REST APIs, SQL

- Designed and developed an executive operations dashboard consolidating 6 business tools — including email, calendar, and Slack — into one interface, eliminating the need to jump between sites to run the business.
- Adopted by both company executives (founder and co-founder), saving hours each week by centralizing communications, scheduling, and project data into a single source of truth.

CVPR Author Analytics Tool — Python, pandas, BeautifulSoup

- Scraped multi-year conference data to surface top contributors and authorship trends, exporting findings into Excel reports for easy stakeholder review.

EDUCATION

University of Colorado Colorado Springs — B.A. Computer Science

Expected Dec 2026

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, C/C++, Technical Writing
